Hi Hector,
yes, it is in USD and it is one time fee.
Of course, without maintenance you will have to pay for upgrades, if you will want them.
Regards,
Jan

Hi Jan, I read all your email and all links, and I have a only one dude with de Price. I attach the price grid for our necessity, in this case the price is \$1900, and here is my dude, this are American Dollars and is a one-time fee?

Thanks and regards.-

| One or more components | Development | License | Mainten |
|---|---|--|-----------------------|
| <i>Choose one or more items in the first column and one item in every next column</i> | | | |
| <input type="checkbox"/> PureGrid Simple grid Not usable with other components | <input type="radio"/> No API Can control TreeGrid only by input data XML or JSON No API and no source codes included | <input type="radio"/> Basic license One server, 10 pages 1 + 1 developers | <input type="radio"/> |
| <input type="checkbox"/> TreeGrid Row based grid No Sheet and Gantt features | <input checked="" type="radio"/> Extended API Can control TreeGrid also from client side JavaScript No source codes included | <input type="radio"/> Personal license All applications Single developer, no company | <input type="radio"/> |
| <input checked="" type="checkbox"/> Gantt chart Must show Gantt chart No Sheet features | <input type="radio"/> Backup source codes TreeGrid source codes for backup and learning purposes Extended API included | <input checked="" type="radio"/> Standard license One application 1 + 3 developers | <input type="radio"/> |
| <input type="checkbox"/> SpreadSheet Cell based grid No Tree and Gantt features | <input type="radio"/> Debug source codes TreeGrid source codes for debugging purposes Extended API and Backup source codes included | <input type="radio"/> Grand license All applications 2 + 6 developers | <input type="radio"/> |

Hi Hector,
yes, TreeGrid Gantt chart provides these features.
Of course you can try our trial version before purchase to be sure it provides all the features and behavior you need.

There is no difference between internal use and selling the tool.
But if you want to sell your tool, it must be final application, not another web component - just to not compete to TreeGrid itself.
See the license text at <http://www.treegrid.com/LicenseStandard.txt>.

If you want to use TreeGrid in one application only, the Standard license is enough, otherwise you need Grand license.
Check also how many developers will use the component and how many of them can access our technical support.
Standard license is for 4 developers (1 supported) and Grand is for 8 developers (2 supported).

If you want to use only Gantt chart module, the TreeGrid Gantt component is enough, otherwise you can purchase also Grid and / or Sheet component.

It depends on you, if you will want also Extended API, Source codes and maintenance. For more information see <http://www.treegrid.com/Licensing>
You can see the price for the chosen items at <http://www.treegrid.com/Purchase>

Regards,
Jan

Subject: RE: TreeGantt
Importance: High

Hello Jan, no problem to write in English, I only need to apologize for my poor level.

We are developing a project management tool, for internal use. This tool is Web based and was designed to manage Projects, Modules and Tasks, but the actual Gantt functionality we have is not enough. For this reason we are looking for a plug-in to show and update tasks in a Gantt view. With this plug-in we want to be able to change precedence, duration, start and end date of the tasks and modules; and integrate all of this with our tool.

If TreeGantt has this functionality, I need a quote for internal use, and another quote to use in case of we want to sell our tool.

Waiting for your feedback.

Thanks and regards.-

Subject: TreeGantt

Buenas tardes, nosotros estamos terminando el desarrollo de un herramienta Web interna para la gestión de proyectos / módulos y tareas, y la funcionalidad de Gantt que tenemos no cumple con nuestras expectativas, por lo cual estoy buscando un plug-in o una herramienta que me permita mostrar y actualizar los datos en un formato Gantt, que maneje gráficamente precedencia, estado y duración (como mínimo), pero siempre para trabajar de manera integrada con nuestra herramienta.

Si el producto de Uds, tiene esta alternativa, me interesaría saber el costo para uso interno, y el costo en caso que en algún momento vendiéramos nuestro producto con esta funcionalidad incluida.

Saludos, y desde ya, muchas gracias por su tiempo.-
