

Martin,

Thank you for contacting us.

> Is the price in USD?

Yes, the prices are in USD.

> Is It a one-time fee?

Both Commercial and Enterprise licenses are one-time fees. Yet, if you would like to receive the newest updates and have official ticket support after a period determined in a license (1 month for Commercial and 12 months for Enterprise), you can buy a support extension plan, but it's optional.

> If I want to sell final applications, do I need any license or is that covered in the cost?

According to the terms of both Commercial and Enterprise licenses, you are allowed to distribute the DHTMLX components as a part of your product (if it is not a competitor to our component/library).

The only restrictions are:

- You shouldn't include complete product package in your application (including directory "sources"), but use only compressed versions of .js files (which are in codebase folder).
- You are allowed to distribute compressed files as a part of your application. Copyrights must be kept.
- You also shouldn't pass standalone product files to those who have no rights to use them.

Please contact me if you have any questions.

Hi again, I read your mail and I have some doubts.

Is the price in USD?

Is It a one-time fee?

If I want to sell final applications, do I need any license or is that covered in the cost?

I'm interested in the enterprise license.

Yes, dhtmlxGantt has the required functionality.

> I need a quote for internal use, and another quote to use in case of we want to sell our tool.

Unfortunately, we don't have any special licenses for internal use.

dhtmlxGantt is distributed under Commercial and Enterprise licenses.

Commercial license allows you to use dhtmlxGantt only in 1 project (application) by up to 5 developers (from one company). This license doesn't allow using dhtmlxGantt in SaaS solutions.

It comes with Standard support plan: 1 month of unlimited support requests (or 5 support requests within 12 months) and 1 month of free updates (1 update is guaranteed).
dhtmlxGantt Commercial license costs \$449.

Enterprise license allows you to use dhtmlxGantt in multiple projects by the unlimited number of developers (from one company). This license also allows using dhtmlxGantt in SaaS solutions.

It comes with Premium support plan: 12 months of unlimited support requests and updates. Moreover, with Enterprise license you'll get the access to the extra PRO feature - the ability to display multiple Gantt charts on one page.
dhtmlxGantt Enterprise license costs \$979.

Please contact me if you have any questions.

Hello,

We are developing a project management tool, for internal use. This tool is Web based and was designed to manage Projects, Modules and Tasks, but the actual Gantt functionality we have is not enough. For this reason we are looking for a plug-in to show and update tasks in a Gantt view. With this plug-in we want to be able to change precedence, duration, start and end date of the tasks and modules; and integrate all of this with our tool.

If DHTMLX Gantt has this functionality, I need a quote for internal use, and another quote to use in case of we want to sell our tool.

Waiting for your feedback.

Thanks and regards.-
